Art Unit: 1631

DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9 and 14-21, drawn to a method, apparatus, or article of manufacture for calculating a moment of a tertiary protein structure, classified in class 702, subclass 19. If this invention is elected, then the below mentioned species elections are required.
- II. Claims 10-13, drawn to a method for calculating at least two teriary protein structures, classified in class 702, subclass 19.

The inventions are distinct, each from the other because of the following reasons: Inventions I and II are directed to related processes. The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). In the instant case, Invention II is drawn to a plurality of tertiary structures while invention I is drawn to a single structure. The two Inventions require different steps for calculating moments in addition to problems with interactions between protein molecules and solvent not present in a single molecule.

Art Unit: 1631

Because these inventions are distinct for the reasons given above and the search required for Invention I is not required for Invention II, restriction for examination purposes as indicated is proper.

Species Elections for Invention I

This category contains two species elections. Applicant must elect one specie from each category if this Invention is elected. This application contains claims directed to the following patentably distinct species of the claimed invention:

Category #1: Type of metric to be used

Specie A: correlation between residue centroid magnitude and residue solvent accessibility is enhanced using a distance metric. (claims 2, 18)

Specie B: correlation between residue centroid magnitude and residue solvent accessibility is enhanced using an ellipsoidal metric (claims 3, 19)

Specie C: correlation between residue centroid magnitude and residue solvent accessibility is enhanced using a solvent accessibility metric (claim 4, 20)

Generic to category #1: claims 1, 5-9, 14-17, 21

Justification: Each metric is independent and requires its own method steps. Thus, the search required would pose undue burden when searched together.

Category #2: type of amphiphilicity to be employed

Specie D: the global linear hydrophobic moment characterizes an amphiphilicity of the tertiary protein structure. (claim 6)

Art Unit: 1631

Specie E: the global linear hydrophobic moment characterizes the magnitude of the amphiphilicity of the tertiary protein structure. (Claim 7)

Specie F: the global linear hydrophobic moment characterizes the direction of the amphiphilicity of the tertiary protein structure. (claim 8)

Generic to category #2: Claims 1-5, 9, 14-21

Justification: Each type of amphiphilicity is independent and requires its own method steps. Thus, the search required would pose undue burden when searched together.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Art Unit: 1631

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Conclusion

Papers related to this application may be submitted to Technical Center 1600 by facsimile transmission. Papers should be faxed to Technical Center 1600 via the central PTO Fax Center. The faxing of such pages must conform with the notices published in the Official Gazette, 1096 OG 30 (November 15, 1988), 1156 OG 61 (November 16, 1993), and 1157 OG 94 (December 28, 1993)(See 37 CFR § 1.6(d)). The Central PTO Fax Center Number is (571) 273-8300.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Russell Negin, Ph.D., whose telephone number is (571) 272-1083. The examiner can normally be reached on Monday-Friday from 7am to 4pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's Supervisor, Ardin Marschel, Ph.D., Supervisory Patent Examiner, can be reached at (571) 272-0718.

Art Unit: 1631

Any inquiry of a general nature or relating to the status of this application should be directed to Legal Instrument Examiner, Tina Plunkett, whose telephone number is (571) 272-0549.

Information regarding the status of the application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information on the PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
